

Forklift Fleet

Integrated Management System

Custom Access Control

- Increase productivity
- Reduce maintenance costs
- Adaptable to any machine

Machine:

- Real time machine operations monitoring (production, standby, available)
- Maintenance cycles management (automatic warnings for upcoming maintenance operations)
- Time counters (powered up and moving machine)
- Bumping and accidents monitoring
- Add-on for traction and hydraulic motor's, working time monitoring
- Machine's long stops monitoring (powered up machine's inactivity)
- Remote setting of machine's access, for authorized users only (permissions array)
- Information tables, maps and graphs containing machine's activity and inactivity times/percentages, maintenance periods, bumping and accidents ..., etc

User:

- Active working periods monitoring
- Stop cycles monitoring
- Entrance and exit time stamps
- User versus bumping and accident's relationship (reducing accident's risk to minimum)
- User's operations profile

Maintenance:

- Maintenance cycles management
- Maintenance type monitoring (repairing, preventive)
- Machine's maintenance inactivity time monitoring

Battery:

- Charge cycles monitoring
- Autonomy monitoring
- Activity state monitoring
